

CHAM-756 clock simulator

GENERAL DESCRIPTION:

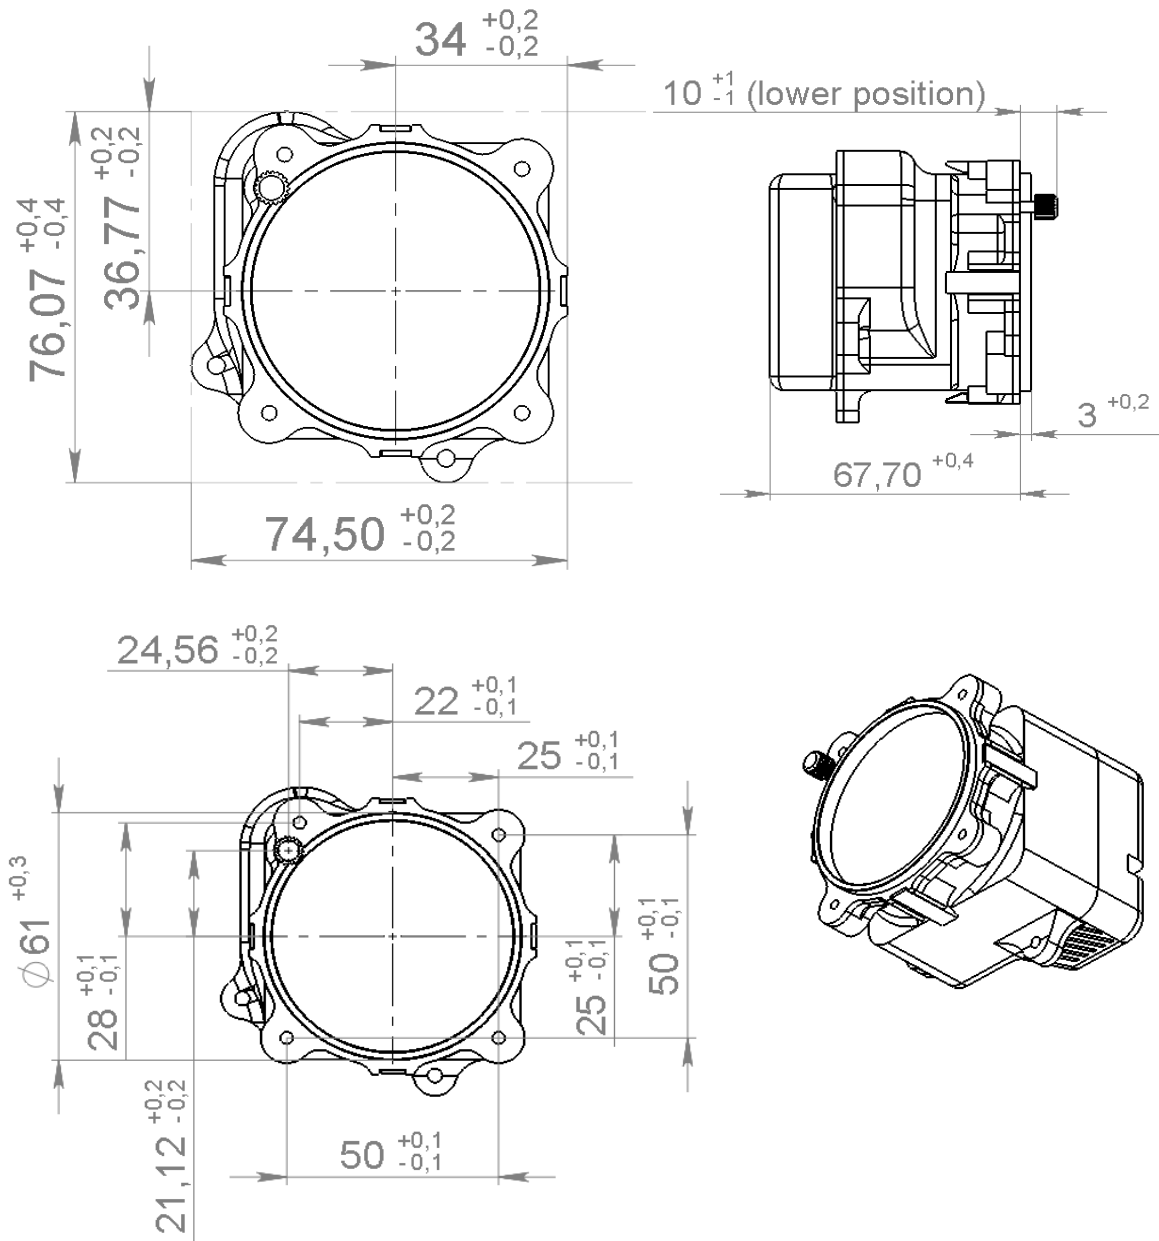

The device simulator is designed to simulate the operation of the original device (CHAM-756). The device simulator is not intended for installation on aircraft.

PINOUT INFO:

PIN N	SIGNAL TYPE	VALUES		NOTE
		MIN	MAX	
1	Vcc	+ 3 V	+ 36 V	Power supply
2	GND	-	-	Common ground

refer to device body for correct pinout

MEASURES AND TOLERANCES:

GENERAL OPERATING CONDITIONS:

Storage temperature range	-20C - +60C
Operating temperature range	+10C - +40C
Operating humidity range	0% - 60 %
Bust-proof and wash-down capable	IP 30

EXPLOITATION NOTES:

- 1) After connection power supply both arrows will move through available range.
- 2) The device do not have any overvoltage protection. Please check power supply before turn on.
- 3) Device do not have reverse polarity protection.
- 4) The device do not have any overheating protection. Use device only in acceptable ambient temperature range.
- 5) Use stable power supply. Unstable voltage can cause incorrect device operation.
- 6) Do not use device with correction handle in lower position. It can cause incorrect device operation
- 7) Use correction handle carefully. Push on it soft with slow rotation if and as required. After correction pull it until upper position.

POSSIBLE PROBLEMS:

- 1) Arrows are not move after turning on the device
recommendations:
 - Check connection of wire harness.
 - Check wire harness connecor.If problem were not detected throuhg this checking please contact with producer.
- 2) Arrows are move unstable
recommendations:
 - Check power supply voltage and voltage stability.
- 3) Second's arrow are mooving good but minute's arrow are not moving stable or totally not mooving
recommendations:
 - Check connection of wire harness.
 - Check wire harness connecor.
 - Check correction handle position, if required pull it to upper position.If problem were not detected throuhg this checking please contact with producer.
